

Helping our planet with Robots

Our shorelines will be faced with the global pollution problem: threatening wildlife and harming our environment.

Robot Missions is embarking on a Field Test using our robot to clean the beach and mitigate the ecological effects

At the Field Test:

- Be introduced to robotics
- Experience STEM hands-on, applied to a challenge outdoors
- Combine environmental science and conservation with technology
- Open to all ages

We need you to take part, inviting the robot to be a member of your community — to *efficiently* help preserve our natural spaces

Westboro Beach: September 23, 1-3pm
